

⚙️ HISASHI HAYASHI

✏️ ARCHIE EDWARDS

COMPONENTS

20 Short Railway Strings

5 Long Railway Strings

1 Mountain String

1 River String

1 Border String

35 Station Cards (Rounded Trees)

5 Starting Stations

60 Victory
Point Tokens

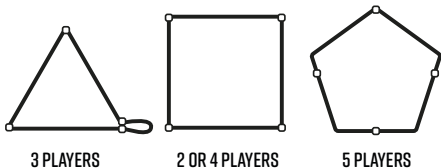

10 Player Markers

NOT USED IN THIS GAME

- Cloth Bag
- 94 Cargo Cubes
- 20 Engine Cards
- 12 Delivery Contracts
- 25 Station Cards (Pointy Trees)
- 4 Goods Markers
- 5 Wildflower Depots

SETUP

1. Each player chooses a colour and takes the starting station, player markers, and railway strings of that colour.
2. Randomly choose the first player. That player places the border string, so that it does not cross itself.
 - If setting up for a three-player game, place the border string into a triangle, so that there is a white marker on each corner.
 - If setting up for a four-player game, place the border string into a square, so that there is a white marker on each corner.
 - If setting up for a five-player game, place the border string in a regular pentagon shape.

3. The player to their left places the river string anywhere inside the border, so that it does not cross itself, and exactly one of its ends touches the border string.
4. The next player to the left places the mountain string anywhere inside the border string, so that it does not cross itself or touch the border or river string.
5. Shuffle the station cards into a facedown station deck.
6. The first player chooses a corner of the border string and places their starting station in that corner. Their station should both be contained within and touching the border string.
7. In clockwise order, the remaining players choose a different corner and place their starting station in the same manner.
8. Place the victory point tokens in a general supply next to the border string.

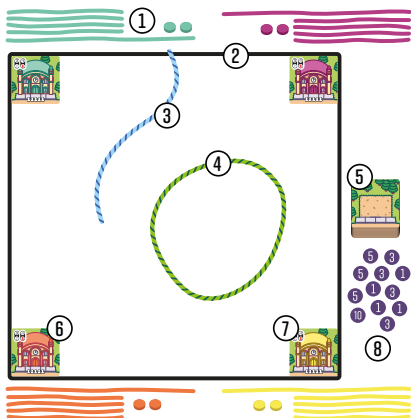

IRREGULAR BORDERS

While we recommend placing the border string as detailed in step 2, if your table won't accommodate it, or you want to create a unique map, you may position the border string in whatever shape you like. If using an irregular shape, position starting stations such that they are all about the same distance from the centre of the playing area. Beware – strange shapes can lead to strange games!

TWO-PLAYER VARIANT

If playing with two players, read the two-player rules on page 10 before setting up and playing the game.

EXAMPLE FOUR-PLAYER SETUP

HOW TO PLAY

Starting with the first player and proceeding clockwise, each player will take a turn. Once all players have taken five turns, the game ends, and the player with the most points wins.

TURN STRUCTURE

On your turn you do the following:

1. Draw and place a station
2. Place a railway string
3. Score points

DRAW AND PLACE A STATION

Draw a station from the top of the station deck. Place the drawn station onto the table such that:

- It does not touch any string.
- It does not touch any other stations.
- It is fully within the border string.

Note: Some stations have effects that are resolved immediately after they are placed (see page 11).

It is generally beneficial to place a station so that you can connect to it with a string this turn.

PLACE A RAILWAY STRING

Choose a railway string in your supply and place it so that:

- Each end of the string is connected to a station.
A string is connected to a station if it touches any part of the station card.
- One end of the string is connected to your starting station, or to a station that is connected to at least one of your previously placed strings.

*While each end of a string **must** connect to a station, a string **may** also connect to additional stations by running through them, as in the diagram on the next page.*

- The string does not enter the same station more than once.
- The string is not beneath an already placed station or railway string.

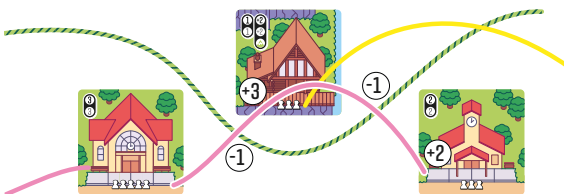

- The string does not cross itself.
- The string does not cause any stations to exceed their player limit (see page 8).

SCORE POINTS

Score points based on the placement of your string this turn:

- Score the connection bonus for each new station you connected to. Do not score for stations already connected to one of your other strings.
- For each time you crossed a previously placed string, lose one point. Do not lose points for strings crossed on top of a station card.

Track your score using victory point tokens. Keep victory point tokens face down to hide your exact score from other players.

The pink player places a railway string, gaining five points for the stations they connected to for the first time, and losing two points for crossing the mountain string twice. They don't lose points for crossing the yellow string as they crossed it on top of a station card.

GAME END

The game ends after all players have taken five turns. The player with the most points wins. Tied players share the victory.

STATIONS

All stations have a player limit and a connection bonus.

Player Limit. The maximum number of players that can have strings connected to the station. You cannot place a string in such a way that the player limit on a station would be exceeded.

There is no limit to number of strings a player can have connected to a station.

Connection Bonus. The number of points you get for placing a railway string that connects to the station for the first time. The value in black (top) applies if you were the first player to connect to the station. Otherwise, the value in grey (bottom) applies.

SPECIFIC STATION ICONOGRAPHY

Draw Station. When you place a station with this symbol, immediately draw and place a second station. If this icon also appears on the second station, disregard it – do not draw and place a third station.

Mountain Bonus. The connection bonus is worth an additional two points if the station is within the mountain string.

Terminus. Railway strings cannot pass through this station – railway strings connected to this station must start or end on it.

Multiplier. Each time a railway string is placed that connects to this station, the player who placed the string scores the connection bonus.

For all other stations, players only score the first time they connect to them.

Player Marker. When you place this station, immediately add a player marker to it. If you draw a station with this symbol and you have already placed both of your player markers on stations, return the drawn station to the bottom of the station deck and draw again.

Each time another player scores the connection bonus for this station, the player whose player marker is on the station scores one point.

Each time another player scores the connection bonus for this station, the player whose player marker is on the station, or whose starting station it is, loses one point.

TWO-PLAYER VARIANT

SETUP

Setup as if for a four-player game with the following exceptions:

- Each player takes two colours of strings, player markers, and starting stations.
- The first player also acts as third in turn order.
- The other player acts second and fourth.

GAMEPLAY

During the game, each colour counts as a separate player for all purposes. For example, if one player connects to a station with both of their colours, they count as two for purposes of player limit.

At the end of the game, each player totals the scores of the two colours they control. The player with the most points overall wins. Tied players share the victory.

STATION GLOSSARY

Starting Station

Each time another player scores the connection bonus for this station, the player whose starting station it is loses one point.

Hamlet Station

No special rules.

Village Station

No special rules.

Town Station

No special rules.

Scenic Station

The connection bonus is worth an additional two points if the station is within the mountain string.

Rural Station

When you place a rural station, immediately draw and place a second station.

*If you draw a second rural station, do **not** draw and place a third station.*

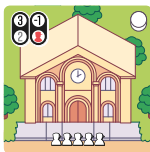

Terminus

Railway strings cannot pass through this station. Railway strings connected to this station must start or end on it.

Railyard

Each time a railway string is placed that connects to this station, the player who placed the string scores the connection bonus (as opposed to only the first time).

Landmark Station

When you place this station, immediately add a player marker to it. Each time another player scores the connection bonus for this station, the player whose player marker is on the station loses one point. *If you draw a landmark station and you have already placed both your player markers on stations, return it to the bottom of the deck and draw again.*

Depot

When you place this station, immediately add a player marker to it. Each time another player scores the connection bonus for this station, the player whose player marker is on the station scores one point. *If you draw a depot station and you have already placed both your player markers on stations, return it to the bottom of the deck and draw again.*
